Moody's de Mexico S.A. de C.V. ("Moody's") has today affirmed the Inter-American Investment Corporation (IDB Invest) Aa1 senior unsecured global scale ratings and the Aaa.mx senior unsecured national scale ratings of the MXN2,000 million 3-year bond (BIDINV 1-20) issued in October 2020 and the MXN2,500 million 3-year bond (BIDINV 1-21G) issued in March 2021. In a related action, Moody's Investors Service affirmed the IDB Invest's Aa1 long-term issuer rating, its short-term issuer rating and commercial paper rating at Prime-1 (P-1), the senior unsecured MTN program's rating at (P)Aa1 and maintained the stable outlook.

The affirmation of the ratings is supported by: IDB Invest's robust capital adequacy, with a leverage ratio that remains at comparatively strong levels relative to Aa-rated multilateral development banks (MDBs) and very high asset performance in the context of continued expansion of operations and the pandemic response; a strengthened liquidity and funding profile, including the diversification of markets and its investor base, with a particular focus on ESG-linked bonds; and a bolstering of governance that supports IDB Invest's strong credit metrics and developmental impact, which is reflected in a positive assessment of financial strategy and risk management, a Governance consideration under Moody's ESG framework.

ROBUST CAPITAL ADEQUACY METRICS IN THE CONTEXT OF LENDING EXPANSION AND PANDEMIC RESPONSE

Since the start of the IADB Group’s Renewed Vision process for the private sector in Latin America and the Caribbean in 2016, IDB Invest has expanded its developmental operations in the region. This, in turn, has led to an increase in the leverage ratio, which Moody's calculates as development-related assets (DRA) to equity, to 227% in 2021 from below 100% in 2018. The significant response provided by IDB Invest during the pandemic in 2020-21 was also an important driver of the rise in leverage. Moreover, at this level, IDB Invest's capital position is still stronger than most Aa-rated MDBs and consistent with its robust capital adequacy, which has historically been a key strength of IDB Invest's credit profile.

Additionally, the credit quality of its DRA has continued to benefit from prudent lending policies that contribute to a geographical diversification, the use of insurance as a credit enhancement, and a still-low level of equity investments. And while IDB Invest's DRAs have increased rapidly in recent years, its conservative lending practices have contributed to keeping non-performing loans relatively low even during the pandemic. The non-performing asset ratio fell to 0.3% in 2021, having averaged 0.6% in 2017-21. Consequently, IDB Invest has maintained very strong and stable asset performance, particularly when compared with other entities that focus on the private sector.
MARKET DIVERSIFICATION AND ESG FOCUS STRENGTHENED LIQUIDITY AND FUNDING PROFILE

As part of the expansion of its developmental operations, IDB Invest has also enhanced its borrowing practices. Since 2016, it has increased the number of regional and global markets in which it issues leading to a higher diversification in terms of currencies and investor base, larger issuance sizes and extending its maturity profile. The development of its sustainable debt framework has allowed IDB Invest to also enhance its presence in the ESG-focused market. In 2021, all of IDB Invest's issuances had social and environmental features, including gender bonds, transition and decarbonization bonds, and a blue bond. This, in turn, has allowed IDB Invest to lower its borrowing costs to rates closer to those seen by Aaa-rated MDBs.

Importantly, IDB Invest's liquidity remains strong, guided by its conservative liquidity policy. Moody's considers that in a severe stress scenario where IDB Invest is unable to issue debt or receive any additional capital contribution from its shareholders, its liquid assets would cover more than 18 months of debt service, planned disbursements and operational costs. These factors support the IDB Invest's high quality of funding, a key credit feature it shares with Aa1-rated peers.

BOLSTERING OF GOVERNANCE SUPPORTS IDB INVEST'S STRONG CREDIT METRICS AND DEVELOPMENTAL IMPACT

During the expansion of its developmental activities, IDB Invest has continued to bolster its risk management policies, which support its strong capital adequacy and liquidity metrics. These measures include an updated risk appetite policy and the addition of a capital buffer to ensure the preservation of equity under stress scenarios, among other measures, which Moody's considers will continue to help IDB Invest manage the risks posed by its regional and private sector-focused mandate as it reaches its new lending capacity.

IDB Invest has also made progress in incorporating ESG aspects to its policies and practices. IDB Invest was one of the first MDBs to adopt the Task Force on Climate-Related Financial Disclosures (TCFD) reporting standards to ensure transparency in its operations related to environmental issues. IDB Invest now has specific ESG functions for both its risk and strategy departments that allows it to develop programs and projects that seek to meet the IADB Group's climate and social development goals, while also monitoring the performance of projects and private sector entities it funds in terms of their adherence to ESG-related targets or criteria. In addition to supporting its developmental impact, these practices have benefited IDB Invest in terms of its appeal to investors as denoted by its comparatively favorable borrowing costs.

FACTORS THAT COULD LEAD TO AN UPGRADE OR DOWNGRADE OF THE RATINGS

Upward rating pressure is limited by the difficult operating environment in which IDB Invest carries out its lending and investment activities, in addition to potential risks from its private sector-focused operations. Although unlikely, the introduction of callable capital as an additional backstop for investors would enhance IDB Invest's credit profile and could exert upward pressure on the credit profile.

Downward rating pressure would emerge if there were significant credit losses, for instance, from a more acutely difficult operating environment, which substantially limits IDB Invest's financial performance, or a weakening of the support from IADB or its highly rated shareholders. A sharp deterioration in capital adequacy as a result of an excessive increase in leverage would weigh on IDB Invest's credit profile.

The period of time covered in the financial information used to determine Inter-American Investment Corporation's rating is between 1 January 2019 and 31 December 2021 (source: audited financial statements).

Moody's National Scale Credit Ratings (NSRs) are intended as relative measures of creditworthiness among debt issues and issuers within a country, enabling market participants to better differentiate relative risks. NSRs differ from Moody's global scale credit ratings in that they are not globally comparable with the full universe of Moody's rated entities, but only with NSRs for other rated debt issues and issuers within the same country. NSRs are designated by a "nn" country modifier signifying the relevant country, as in "za" for South Africa. For further information on Moody's approach to national scale credit ratings, please refer to Moody's Credit rating Methodology published in May 2016 entitled "Mapping National Scale Ratings from Global Scale
Ratings*. While NSRs have no inherent absolute meaning in terms of default risk or expected loss, a historical probability of default consistent with a given NSR can be inferred from the GSR to which it maps back at that particular point in time. For information on the historical default rates associated with different global scale rating categories over different investment horizons, please see https://www.moodys.com/researchdocumentcontentpage.aspx?docid=PBC_1280297.
